

HARLEY USHER ALIBIN

Quezon City, Metro Manila, Philippines | huc.alibin@gmail.com | +63 9569730849

SUMMARY

Graduating Computer Science student with experience in system architecture design, full-stack development, and leadership roles across both academic and independent projects, frequently mentoring peers and driving technical decisions. Seeking software engineering opportunities to apply and grow my skills in building scalable systems within collaborative, high-performance teams.

EXPERIENCE

Software Engineer Intern

June 2025 - July 2025

Intellismart Tech Inc.

- Led and mentored a small team of interns through the development of an in-house app.
- Collaborated with full-time company developers to adopt company engineering practices, and learned and adapted to the tech stack used by the company.
- Communicated regularly with stakeholders to elicit requirements, provide system progress updates, and refine goals and system design decisions.
- Built an information directory application using React, ExpressJS, and PostgreSQL, leading project development and building the backend systems.

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, C & C++, SQL, HTML, CSS, Javascript, Typescript
- **Frameworks:** React, Django, Flask, ExpressJS, Spring Boot
- **Databases:** PostgreSQL, MySQL, Apache Derby, Firebase
- **AI / Machine Learning:** Tensorflow, Keras, OpenAI
- **Data & Visualization:** NumPy, Matplotlib, Pandas
- **Cloud/DevOps:** AWS, Docker
- **Other Tools:** Git, Windows Subsystem for Linux, REST APIs, Notion

PROJECTS

ITI HRdotNet in-house Information directory

June 2025 - July 2025

- Designed and planned the system architecture of an in-house information directory for Intellismart Tech Inc., emphasizing modularity for maintainability and future scalability.
- Developed the React frontend, implementing page routing and authentication using JSON Web Tokens (JWT).
- Built the backend using Express.js, leveraging an MVC architecture to ensure separation of concerns and maintainable, scalable code.
- Designed the database schema and integrated it with Sequelize ORM to support modular and database-agnostic development.
- Mentored a team of interns, planning tasks, managing timelines, and aligning development goals with stakeholder requirements.

Technologies used: React, ExpressJS, Sequelize ORM, PostgreSQL

Kinetiq Enterprise Resource Planning System**Mar 2025 - May 2025**

- Built and deployed manufacturing ERP system hosted with AWS, including S3 for storage, RDS PostgreSQL for relational data, Lambda for serverless APIs, and Cloudfront for content delivery.
- Designed and implemented the initial React frontend boilerplate and Django backend scaffold, providing a standardized foundation for development teams.
- Developed full-stack features including secure, encrypted login, notifications, and user profile systems.
- Coordinated microservice integration by resolving merge conflicts and coordinating with development teams on Git workflows

Technologies used: *React, Django, PostgreSQL, AWS (Lambda, RDS, Cloudfront, S3)*

CStar Compiler**Nov 2024 - May 2025**

- Designed and built a C and C++ inspired compiler, incorporating features from languages like Python and Java to create a cleaner, more streamlined syntax.
- Wrote the system's lexical analyzer, ensuring that the compiler correctly traverses its transition diagram while reading the input character stream.
- Designed the node structure for the project's Syntax Analyzer and Abstract Syntax Tree to be used downstream for transpilation

Technologies used: *React, Flask, Python, Javascript, CSS*

Haliya**May 2024 - Jun 2024**

- Developed a full-stack AI chatbot using Flask and React, integrating OpenAI's API to process user input and generate real-time responses.
- Led development by defining architecture, coordinating team tasks, and integrating code changes using Git
- Built backend components for API integration and token management, supporting seamless communication between frontend and OpenAI services

Technologies used: *React, Flask, OpenAI*

Schedulr**May 2023 - Jun 2023**

- Led the development of a web-based scheduling system built around Java.
- Managed project deadlines, distributed tasks across team members, and guided overall project direction to ensure timely delivery
- Developed ETL operations over Apache Derby using JDBC, handling data extraction, transformation, and loading for reliable database management
- Implemented scheduling logic in Java, including algorithms for conflict resolution.

Technologies used: *Java, JSP, Apache Derby, JDBC, Apache Tomcat, xampp*

EDUCATION

Bachelor of Science in Computer Science**2022-2026***Pamantasan ng Lungsod ng Maynila, College of Information Systems and Technology Management*

- *Consistent Dean's list qualifier*
- *Frequently takes key development roles in major academic and collaborative projects.*
- *DOST-SEI Merit Scholar.*

Relevant Coursework: Discrete Structures, Object Oriented Programming, Data Structures & Algorithms, Algorithm & Complexity, Software Engineering, Compiler Design, Computational Science. Application Development

Science, Technology, Engineering, & Mathematics (STEM) Track**2015-2021****Quezon City Science High School**
