

I. GENERAL RULES

1. **Originality** – All game concepts, assets, and code must be original. Plagiarism or unlicensed asset use is prohibited.
2. **Sector Relevance** – The game must address a real-world problem or need in at least one sector (e.g., education, healthcare, disaster management, tourism, environment, business, governance, culture).
3. **Platform** – The game must be deployable on **Android**.
4. **Game Type** – May be **2D or 3D**, but must include animation, interactivity, and user engagement mechanics.
5. **Educational or Social Value** – The game must promote learning, awareness, skill development, or positive social behavior.
6. **Ethical Design** – No violent, discriminatory, explicit, or harmful content.
7. **Accessibility** – The game should include accessibility features (e.g., readable text, simple controls, clear UI).
8. **Team Size** – Individual or group work (maximum 3–5 members).
9. **Documentation** – All stages must be properly documented and submitted.
10. **Deadlines** – Strict compliance with milestones and submission schedules.

II. TECHNICAL & DESIGN REQUIREMENTS

A. Game Design Requirements

- Clear **game objective and storyline**
- At least **3 levels/stages** with increasing difficulty
- Defined **player roles and interactions**
- Functional **win/lose conditions**
- In-game **feedback system** (scores, health, achievements, hints)

B. Animation Requirements

- Minimum of **5 animated assets** (characters, objects, or environments)
- Smooth transitions and movements
- Use of animation principles (timing, easing, consistency)

C. System Requirements

- Game runs smoothly on mobile devices (minimum FPS requirement)

- Functional UI/UX with menu, settings, pause, and exit options
- Data persistence (save/load progress)
- Basic sound effects and background music

D. Tools & Technologies

- Game Engine: Unity, or equivalent
- Programming: C#, C++, or equivalent
- Graphics: Blender, Adobe Animate, Photoshop, etc.

III. CONTENT REQUIREMENTS (SECTOR ALIGNMENT)

Each game must be aligned to at least **one sector**, with measurable outcomes:

Sector	Example Game Theme	Required Outcome
Education	Math adventure, coding quest	Improves learning skills
Health	Healthy lifestyle simulator	Promotes wellness
Environment	Climate defender, recycling game	Raises awareness
Government	Civic duty quest, election simulator	Encourages civic responsibility
Business	Entrepreneurship tycoon	Teaches financial literacy
Tourism	Virtual heritage explorer	Promotes cultural appreciation
Disaster Risk	Flood rescue simulator	Enhances preparedness
Social Development	Anti-bullying game	Builds empathy

IV. PROJECT REQUIREMENTS (SUBMISSIONS)

Students must submit the following:

- 1. Concept Proposal**
 - Game title, sector, problem statement, objectives, target users
- 2. Game Design Document (GDD)**
 - Storyline, mechanics, characters, UI, scoring, levels, controls
- 3. Storyboard & Wireframes**
 - Visual flow of gameplay and interface
- 4. System Design**
 - Architecture diagram, flowchart, use case diagram

5. Source Code Repository

- Well-commented code with version history

6. Playable APK / IPA File

7. User Manual

8. Testing & Evaluation Report

9. Final Presentation & Demo Video
